INDUSTRIAL gears

W E L C O M E T O V O G E L A N T R I E B S T E C H N I K

We thank you for your interest in our low backlash gearboxes. VOGEL Antriebstechnik has been highly regarded for more than 70 years offering a wide variety of products to a broad range of business sectors with applications that require innovative, dependable gearbox manufacturing technology. We develop high quality products that are very convincing with their precision, long service life and a high power density. We take advantage of a continuous dialogue with our customers and of constant communication with research and scientific sources.

Our primary focus is to supply you, our customer and partner, with the most cost-effective and efficient product solutions for your needs, in order to safeguard your viability in future markets.

Allow our products and services to win you over.

Up-to-date + compact

FUTURE IN MOTION

Continuity and development are mutually dependent cornerstones of our corporate tradition. For the past 60 years we have been constantly committed to products and markets with maximum quality consciousness. As a mid-sized, family owned company this sense of continuity is highly important to us; the executive management in its third generation accepts personal responsibility for this.

On the other hand we actively determine the future of gearbox manufacturing through our technological developments, thus ensuring market capability for our customers. Because the only valid constant is change.

PARTNERSHIP FOR TECHNOLOGY

Efficiency and safety from initial discussions of a project to the finished product and beyond – that is the target of our offensive with respect to quality and service management. We initially carry out a thorough, detailed consultation individually in accordance with the requirements of your application. Once the ideal solution is decided upon, we produce flexibly and on schedule, precisely in accordance with your requirements.

Our customers rightly expect smooth and uninterrupted manufacturing processes. You can count on an almost maintenance-free product over the entire life cycle when using VOGEL gearboxes.

Should you still require our support at some stage, there is a world-wide service network available to assist you as soon as possible with a replacement gearbox or an on-site repair. To keep your production line running!

COMPETENCE IN THE MARKET

VOGEL Antriebstechnik is found everywhere where machinery is built, in all sectors and at all sites. Wherever you manufacture, we will be at your side.

Internationally, our customers are looked after by our distribution and service partner Lenze. That means we have a presence in the important markets and you benefit globally from direct access to our expertise and product ranges.

INDUSTRY SOLUTIONS

With VOGEL you stay flexible. For example our modular gearbox system offers you the widest variety of combination possibilities. On the basis of these product standards we can also offer you the desired modifications needed for your field of activity. It goes without saying that such services are

cost-optimised and in accordance with your specifications. For unusual requirements we offer entirely individual solutions. In such cases we assess application conditions in cooperation with you, advise you reliably and construct special gearboxes for you, including gear manufacturing.

S U C C E S S F U L A P P L I C A T I O N S

Our gearboxes have a broad and constantly increasing range of applications.

- Drive and automation engineering
- Robotics and handling
- Packaging machinery
- Plastics and film processing machines
- Printing machinery
- Paper processing
- Machine tools
- The food and pharmaceutical industry

and many more

PRODUCT RANGE

The range of VOGEL Antriebstechnik offers nominal output torques of between 10 Nm and 26000 Nm. Our range of standard solutions extends from classic machinery gearboxes, through compact technology for coaxial and right-angle applications, to our own high-precision servo

products. Always in mind: dynamic development of all existing series with the aim of creating optimum drives for our customers, technologically and thus economically.

SERVO gears

- High speed
- Short cycle times
- Low backlash

Mechanical gears

- Universal application
- Efficient and reliable

All VOGEL gearboxes can be combined with each other. In this way you benefit from the advantages of various gearbox types.

Industrial gears

- High torques
- Long life time

Customer-specific solutions

- Special spiral bevel gearboxes
- Special solution for mobile drive technology
- Special planetary gearboxes for high-speed applications
- Gearing technology

and many more

Q U A L I T Y

Our internal high standards of quality often far exceed those commonly found in the industry. Because of this extensive and consistent quality control, we are in a position to offer you especially reliable, low-maintenance and durable gearboxes, a factor confirmed again and again in dialogue with our long-term customers.

Our extensive manufacturing expertise within development and production, guarantees noise- and torque-optimised gearing technology at the highest standards. Upon request we can also supply inspection reports or certification for any gearbox, e.g. with respect to run-out error or backlash.

In this way we ensure for you:

- Highest levels of precision and dynamics
- Long product life
- Maximum flexibility
- Maximum environmental compatibility
- Minimal effort for the complete life cycle
- Unbeatable efficiency
- Excellent energy efficiency

C O N S U L T A T I O N

In every phase of collaboration with VOGEL you benefit from our unique sector-specific expertise, gathered over decades in close cooperation with our national and international partners. We develop concepts together with you for the cost-effective solutions of your application. In this respect we initially analyse and determine the most important environmental parameters such as application conditions, loads, duration of operation, speeds, motion sequences etc. in order to find the best product solution.

S E R V I C E

Together with our service and distribution partners we make sure that we are there when you need us, whether for supply of parts, repairs and service or technical support, both on a national scale and internationally.

C O M M U N I C A T I O N

Up-to-date and comprehensive product information, service manuals, catalogues, technical documentation, contact data and quality documents are available to you in a variety of languages via our website. In addition we can provide you with the relevant information on CD-ROM. For technical data exchange we offer over 100 different interfaces and guarantee support for all globally current CAD software programs, thus shortening development cycles.

T R A I N I N G

Upon request you can take advantage of individual product and service training as well as general educational courses on drive and automation technology. In addition, we are also always pleased to inform you of intelligent maintenance strategies that will optimise your manufacturing performance. Simply contact our service team.

S E R V I C E S

P R E C I S I O N

Maximum precision in every detail – that is what sets all VOGEL gearboxes apart. From optimised product geometry and highly precise, fine ground gear teeth to careful mounting. With improved design and minimised tolerances we achieve a remarkably high torsional and tilting rigidity with minimal noise emission and unbeatably quiet running.

F L E X I B I L I T Y

Thanks to their practical design and intelligent construction, our low backlash gearboxes can be used variably across a very wide spectrum of applications. With a large selection of motor adapters, multiple drive combinations are possible. A large ratio range with fine increments renders them absolute all-rounders for all sectors.

C O S T - E F F I C I E N C Y

A high level of efficiency for maximum cost-effectiveness. With optimised concentration on the smallest possible shaft diameter, we achieve efficient results without friction losses and therefore without loss of energy. Economically, VOGEL also convinces with extremely simple motor mounting – thus saving time, which in turn decisively aids your manufacturing processes.

C O M P A C T N E S S

A compact design, short overall lengths – VOGEL Antriebs-technik offers performance and efficiency on a highly compact scale. This is made possible in no small way by helical gear teeth, allowing greater torques with uniform and low-noise drive motion.

D U R A B I L I T Y

We place particular emphasis on high quality for all materials, components and parts used. In doing so we are able to guarantee maintenance-free, reliable operation as well as maximum service life even under very high operational stress. Optimal lubrication of gearboxes is guaranteed.

D Y N A M I C S

With strengthened bearings our gearboxes are able to withstand high forces – even with high speeds and in extreme cases when overloaded. This is possible by the implementation of full needle bearings. Low gearbox weight, combined with compact construction offers enhanced inertia values – further proof of the dynamics of our gearboxes.

D I M E N S I O N I N G A N D S E L E C T I O N

Investigation of a gearbox to determine suitability for an application can be carried out by comparison of maximum possible motor torques and gearbox data. In this case the applications are differentiated according to EN 60034-1 with operating mode continuous operation (S1) and cyclic operation (S4/S5).

For cyclic operation, the maximum motor acceleration torque

is used. For continuous operation the nominal motor torque is taken into consideration. If the maximum possible motor torque exceeds permissible values of the required gearbox, a recalculation involving the torques actually required by the application must be carried out.

Mounting advice

All specifications are valid for the following ambient conditions:

- No heating of gearbox by the motor
- Mounting plate size /square = 2 x gearbox size
- Mounting plate material = steel
- Unobstructed thermal convection /
no housing encloses gearbox
- Ambient temperature = maximum +30 °C
- The operating mode is S5
Please contact us if you intend to use other operating modes

GEARBOX PRESELECTION

Gearbox preselection cannot be a substitute for a detailed gearbox selection.

DETAILED GEARBOX SELECTION

$$T_{2m} = \sqrt[3]{\frac{|n_{2b} * t_b * T_{2b}^3| + \dots + |n_{2v} * t_v * T_{2v}^3|}{|n_{2b} * t_b| + \dots + |n_{2v} * t_v|}} \text{ [Nm]}$$

$$n_{1m} = n_{2m} * i$$

$$n_{2m} = \frac{|n_{2b} * t_b| + \dots + |n_{2v} * t_v|}{t_b + \dots + t_v} \text{ [min}^{-1}\text{]}$$

include. idle time

$$d_{min} \leq d_{Mot} \leq d_{max}$$

The motor shaft must fit in the shaft locking bush. Motor shaft length: see dimensional drawings

$$T_{2maxMot} = T_{1maxMot} * i * \eta_{gearbox}$$

With motor at full load, the gearbox must not become damaged; limit motor current if applicable.

* Angular gearboxes, please contact us.

The planetary gearbox consists of the coaxial sun gear, planet carrier and outer gear sub-assemblies, and is combined with the planet gears rotating at constant centres about the planet carrier. The input is from the sun gear. The drive motion to the planet carrier (output shaft) is via the planet gears. The rolling contact of the planet gears with the outer gear provi-

des the appropriate ratio. Multi-stage gearboxes are available by connecting the individual stages in sequence. Within the gear assembly the individual stages are sized to their torque requirement.

Technical specifications on this page and in the tables on the following three pages are intended only for rough preselection.

Gear teeth:	helical gear	Lubrication:	lubricated for life
Direction of rotation:	input and output in the same direction	Mounting position:	any
Efficiency:	1-stage $\eta \geq 97\%$ 2-stage $\eta \geq 95\%$	Surface protection:	primer coat RAL 9005 Black
Life time:	20000 h	Protection rating:	IP65
Permissible gearbox temperature at housing:	-10 °C to +90 °C		

MPG 050 - MPG 100

TECHNICAL DATA

The following technical specifications in the table are intended only for rough preselection

MPG	050															
Gear stages			1				2									
Ratio		i	4	5	7	10	16	20	25	28	35	40	50	70	100	
Max. acceleration torque (max. 1000 cycles per hour)		T _{2bzul}	Nm	44	44	44	35	44	44	44	44	44	44	44	35	
Nominal torque on output (with n _{1Nzul})		T _{2Nzul}	Nm	29	29	29	19	29	29	29	29	29	29	29	19	
Emergency stop torque (permissible 1000 times during gearbox life time)		T _{2Notzul}	Nm	110	110	107	88	110	110	110	110	110	110	110	88

Technical specifications on this page and in the tables on the following three pages are intended only for rough preselection.

Gear teeth:	spur gear	Lubrication:	lubricated for life
Direction of rotation:	input and output in the same direction	Mounting position:	any, please specify when ordering
Efficiency:	1-stage $\eta \geq 97\%$ 2-stage $\eta \geq 95\%$	Surface protection:	Primer coat RAL 9005 Black
Life time:	20000 h	Protection rating:	IP54
Permissible gearbox temperature at housing:	-10 °C to +90 °C		

MPL 050 - MPL 100

TECHNICAL DATA

The following technical specifications in the table are intended only for rough preselection

MPL		050													
Gear stages			1					2							
Ratio		i	3	4	5	7	10	12	16	20	28	35	50	70	100
Max. acceleration torque (max. 1000 cycles per hour)		T _{2bzul}	Nm	32	40	40	40	32	40	40	40	40	40	40	32
Nominal torque on output (with n _{1Nzul})		T _{2Nzul}	Nm	20	25	25	25	15	25	25	25	25	25	25	15
Emergency stop torque (permissible 1000 times during gearbox life time)		T _{2Notzul}	Nm	80	100	100	100	80	100	100	100	100	100	100	80
Permissible average input speed (with T _{2Nzul} and 20 °C ambient temperature)		n _{1mzul}	min ⁻¹	2600	3300	3300	4000	4000	4400	4400	4400	4800	4800	4800	5500
Max. input speed		n _{1maxzul}	min ⁻¹			8000						8000			
Max. backlash*		j	arcmin			≤ 8						≤ 10			
Torsional rigidity [▲]		C	Nm/arcmin			3,5						3,5			
Max. radial load** (with reference to shaft centre on output shaft)		F _{2rzul}	N			1450						1450			
Max. axial load** (with reference to shaft centre on output shaft)		F _{2azul}	N			1550						1550			
Weight		m	kg			1,9						2,5			
Running noise (with n ₁ = 3000 min ⁻¹ without load)		L _{PA}	dB(A)			≤ 70						≤ 70			
Inertia (with reference to input)	Ø d 9	J ₁	kgcm ²	0,28	0,23	0,21	0,19	0,18	0,26	0,21	0,20	0,19	0,19	0,18	0,18

ANGULAR SERVO SPIRAL BEVEL GEARBOXES

Unlike with a spiral bevel gearbox, the axes of drive pinion and bevel gear are offset on servo spiral bevel gearboxes, in other words they do not intersect.

The hypoid gearing offers higher ratios in one stage and much quieter running noise.

The convincing features of the servo spiral bevel gearbox are a low and constant backlash coupled with high nominal speeds.

The servo spiral bevel gearbox can also be used as a multi-stage gearbox in combination with low-backlash planetary gears if greater capacities are required.

SKPR(N)

TECHNICAL DATA

Technical specifications on this page and in the tables on the following pages are intended only for rough preselection.

Gear teeth: SKPR(N) 01 – SKPR(N) 04
Klingelnberg spiral bevel toothing,
spur toothing

Direction of rotation: The opposite direction when facing C and A

Efficiency: Size 01 $\eta \sim 0,93$
Size 02 $\eta \sim 0,93$
Size 03 $\eta \sim 0,92$
Size 04 $\eta \sim 0,92$

Life time: 20000 h

Permissible gearbox temperature at housing: -10 °C to +90 °C

Lubrication: lubricated for life

Mounting position: Please specify when ordering

Surface protection: Primer coat RAL 9005 Black

Protection rating: IP 54

SKPR(N) 01 - SKPR(N) 02

MOUNTING POSITION

Mounting position:

Side view

A

B

Mounting position:
(underside)

Mounting position C/D/E/F

The gearboxes have on the flange side B on all faces threaded plugs.

The breather screw is supplied loose and must be fitted upon installation.

See the following sketch.

C

D

E

F

Mounting position A/B

Attention! For mounting position "A/B" = underside consultation with Vogel Antriebstechnik is necessary.

SK(N), SKH, SKPR(N), SKPG MOUNTING POSITION

Output Breather assembling:

1 = Breather

2 = Threaded plug

ANGULAR SPIRAL BEVEL GEARBOXES

The basic housing has a cubic shape, guaranteeing symmetrical dimensions. Centring possibilities have been included on all input and output sides. The housing and bearing flanges are made of high-grade grey cast iron, have been machined all-round and have fastening threads $2 \times \varnothing$.

The use of sturdy roller bearings ensures a long service life. The modular system allows a wide range of input and output modifications.

ANGULAR BEVEL HELICAL GEARBOXES

The gearboxes have a 2-stage design, input is via a spiral bevel stage, output via a helical stage. The housing and bearing flanges are made of high-grade grey cast iron, have been machined all-round and have fastening threads 1,5 x Ø.

Centring possibilities have been included on all input and output flanges. The use of sturdy roller bearings ensures a long service life. The modular system allows a wide range of input and output modifications.

TECHNICAL DATA

Technical specifications on this page and in the tables on the following two pages are intended only for rough preselection.

Gear teeth:	MKSH 1 – MKSH 4 Klingelnberg spiral bevel toothing ground
Direction of rotation:	The opposite direction when facing C and A
Efficiency:	Size 1 $\eta = 0,90 - 0,92$ Size 2 $\eta = 0,90 - 0,93$ Size 4 $\eta = 0,92 - 0,94$
Life time:	20000 h
Permissible gearbox temperature at housing:	-10 °C to +90 °C
Lubrication:	Oil lubrication
Mounting position:	Any, please specify when ordering
Surface protection:	Primer coat RAL 9005 Black
Protection rating:	IP 54

SHRINK DISC

DIMENSIONS

Order option: Flange and shrink disc available on either side A or B.

MKSH BA70 hollow shaft with shrink disc available either side A or B. MKSHF flange and shrink disc available either side A or B.

Size	D2/D3	D26	L	L20	L25	L2/L3	MA
	H7						
1	25	60	133	53	86	20/21	The required clamping torques MA can be found on the shrink disc.
2	28	72	145	60	88	26/21	
4	38	90	170	70	102	32/31	

Shaft material for the insert shaft: minimum yield strength approx. 360 N/mm².
Recommended shaft fit h6.

Version A

Attention! To make sure to transfer the motor torque in case of an emergency stop, it is required to use a motor shaft with keyway.

It is essential that the motor shaft and the bore on the clamping sleeve are dirt and grease free. Take the clamping bush and fit it to the motor shaft back to the shaft shoulder. Then tighten the coupling screws to the recommended torque. Do this in 3 step either way with 20% / 50% and then 100%. The torque which can be found on a sticker on the coupling. Grease the tooth profile of the clamping bush. With the gearbox in the vertical position and the input flange facing upwards mount the motor onto the gearbox and tighten the motor flange/gearbox fixing bolts.

Version B

It is essential that the motor shaft and the bore on the profiled bush are dirt and grease free. Take the profiled bush together with the shrink disc and fit it to the motor shaft back to the shaft shoulder. Then tighten the coupling screws to the recommended torque, which can be found on a sticker on the coupling. Grease the tooth profile of the profiled bush. With the gearbox in the vertical position and the input flange facing upwards mount the motor onto the gearbox and tighten the motor flange/gearbox fixing bolts.

Version C

The connection between motor and gearbox is made using a shrink disc bush without a keyway. For maximum performance we recommend the use of motors with reduced shaft tolerance and concentricity according to DIN 42955 R standards.

When fitting the motor, position the gearbox vertically with the motor flange upwards. Before assembly, degrease the motor shaft and the blind hole in the gearbox. Remove the lock screw or two plastic plugs from the motor flange of the gearbox, and insert a long Allen key to reach the tangential clamping screw in the coupling. The coupling must first be turned to the correct position for the screw to be accessible. Lower the motor vertically with the motor shaft in the blind hole. Ensure that the motor shaft has completely entered the bore, and that the flanges of motor and gearbox are in contact with each other over their full surface. The motor flange screws can now be inserted (do not tighten them completely). Then tighten the screws of the coupling with the required tightening torque. Do this in 3 steps alternately with 20%, 50% and then 100%.

The torque values for motor mounting can be accessed in our motor mounting manual, which is offered separately. Finish tightening the motor flange screws. After assembly, it is important to reinsert the lock screw or plastic plugs into their holes.
